Spyder3Studio SR™

Ensure your image perfectly matches your vision

Spyder3Studio SR brings you easy to use, full-featured, photographer-oriented solutions for your digital workflow. Offering you the right tools for the right job and a new level of accuracy and control for all your color management needs. It's the cornerstone of any digital darkroom allowing you real-world colors you can rely on. Solutions from RAW Camera calibration, reliable color on-screen to quick and easy custom ICC printer profiles. From start to finish, you'll get results professional studios rely on and the ease of use serious photographer's demand.

Bullet points:

- Complete control over the entire digital workflow from camera to display to print!
- RAW Calibration with SpyderCube ensures the proper light and color-balance in your images
- Calibrate all your LCDs, CRTs, Laptops and front projectors
- Create your own gallery-quality prints in color and black & white
- Produce images accurately the first time, saving time and money
- Designed specifically for the way photographers work

Designed for Professional Photographers, Production Studios, and Professional Users of all kinds.

Features & Benefits

Complete Color Management System

Spyder3Studio SR includes all the serious tools for serious photographers at every step of the digital process; from RAW camera calibration, to display accuracy and perfect prints!

New RAW Calibration with SpyderCube™

In just one shot you can customize white balance and other color adjustments using your favorite RAW conversion software.

Accurate, Predictable Color On Screen

Spyder3Elite offers cutting edge technology and advanced software for calibrating all your studio displays. Advanced software allows total control with user specified calibration targets, ambient light monitoring, matching multiple displays to one target and it even reminds you to re-calibrate.

Consistent Color also for the Latest Display Technology

Sophisticated hardware for optimizing also the latest display technology

Make Your Presentations Shine!

Spyder3Elite allows you to easily calibrate your front projectors for the best presentations. You can be confident your colors are true when showing your images on screen!

New Profiling Speed and Accuracy

New strip reading Spectrocolorimeter gives you custom profiles in minutes with EZ targets for color or black and white. New SpyderGuide™ included for convenience in creating profiles easily and accurately.

New Easy-to-use Profiling Software

Usability is so improved in this step by step process you don't need an extra manual; it's quite intuitive!

Softproof within the Application

Unique SpyderProof™ function gives you a series of carefully selected images to evaluate detail from a photographer's point of view. Profile Softproof available for your displays and each unique printer profile.

Total Control for Gallery Quality Prints

Advanced controls on Color and Black & White Tinting curves in your Image Editor, which allows you to apply adjustments to the profile rather than to each individual image. Extended Grays Target allows you to add precision gray and near gray data to profiles, enhancing quality of Tinted and Black and White prints

Extensive Editing Capabilities

Flexible target options and high patch profiling targets to produce "gallery quality prints" in color or black and white. Easily select prebuilt or custom sets of advanced profiles settings to produce profiles with specific combinations of highlight and shadow tint, and detail and neutrality settings.
